check_id	Each data quality rule (check) has a unique identifier.	N	-
restrict to public RR	Check that requires relationships only considers the publicly available version of the RR-CDF.	not applicable no, restricted to INTERNAL RR yes	Level 1 checks, that do not require level 2 information. Check(s) that are restricted to information that is not publicly available. Check(s) that are restricted to information that is publicly available.
file_type	Type of checks, and which files they apply to.	LEI-CDF LEI-RR RE	Check (CDF 1.0/CDF 2.0) Check Relationship CDF Check Exception Reporting
check_precondition	Necessary conditions for a check in order to be applicable.	-	-
check_description	The check itself, once the preconditions have been met.	-	-
status	The implementation status of the check.	1 2	Implemented Proposed or, to be implemented
cdf_format	The list of CDF fields, that the precondition and the check applies to.	-	-
check_category	The GLEIF data quality check category.	-	-
quality_criterion_id	A numerical representation of one of 12 data quality criteria.	1 - 12	See quality_criterion
quality_criterion	Each check is allocated to one data quality criterion.	1 - Accuracy 2 - Accesibility 3 - Completeness 4 - Comprehensiveness 5 - Consistency 6 - Currency 7 - Integrity 8 - Provenance 9 - Representation 10 - Timeliness 11 - Uniqueness 12 - Validity	The extent to which the data are free of identifiable errors; the degree of conformity of a data element or a data set to an authoritative source that is deemed to be correct; and the degree to which the data correctly represents the truth about real-world objects. Data items that are easily obtainable and legal to access with strong protections and controls built into the process. The degree to which all required occurrences of data are populated. All required data items are included - ensures that the entire scope of the data is collected with intentional limitations documented. The degree to which a unique piece of data holds the same value across multiple data sets. The extent to which data are up-to-date; a datum value being up-to-date if it is current at a specific point in time, and outdated if it was previously current but then incorrect at a later time. The degree of conformity to defined data relationship rules (e.g., primary/foreign key referential integrity). History or pedigree of a property value. The characteristic of data quality that addresses the format, pattern, legibility, and usefulness of data for its intended use. The degree to which data is available when it is required. The extent to which all distinct values of data elements appear only once. The measure of how a data value conforms to its domain value set (i.e., a set of allowable values or range of values).
maturity_level	The associated level of maturity as defined in the data dictionary.	1 2 3	Maturity Level 1 (Required) Maturity Level 2 (Expected) Maturity Level 3 (Excellent)
standard	The source of the check.	GLEIF LEI Data File Format 1.0 LEI Data File Format 2.0 RR File Format 1.0	-
check_intention	The intention or spirit of the check.	N	-
