

The Trust Gap in a Data-Driven World

Unlocking Trusted Entity Data for Seamless Global Interoperability

The Accessibility Barrier

Trusted data is often fragmented across different APIs, databases, and documents.

Growing Complexity

Navigating interconnected global economies requires high-quality information.

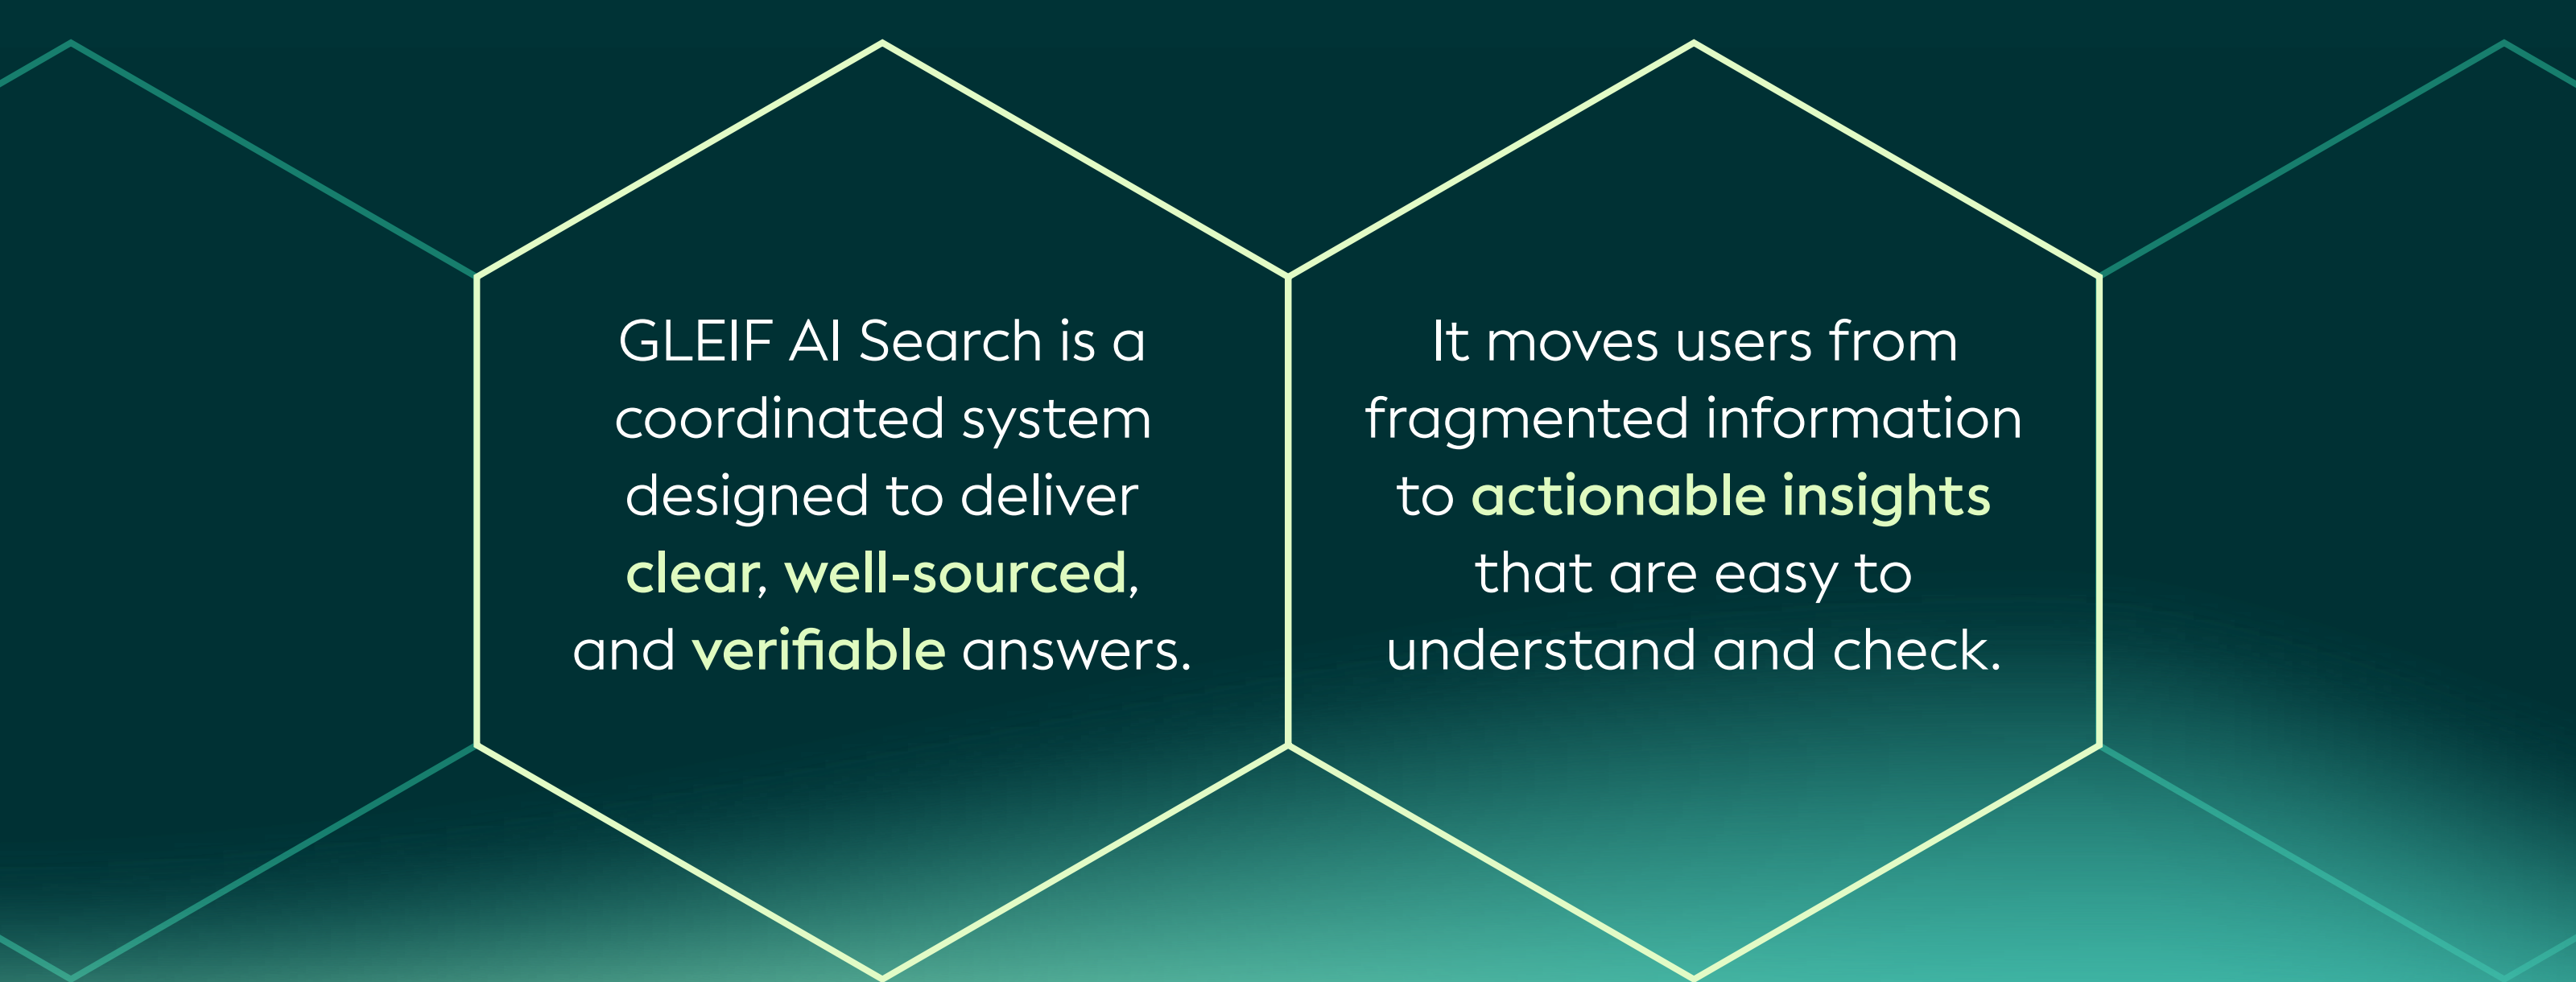

The AI Trust Paradox

Users only trust AI-generated answers when they are rooted in high-quality data and transparent citations.

The Solution

GLEIF AI Search

Transforming Data into Opportunities

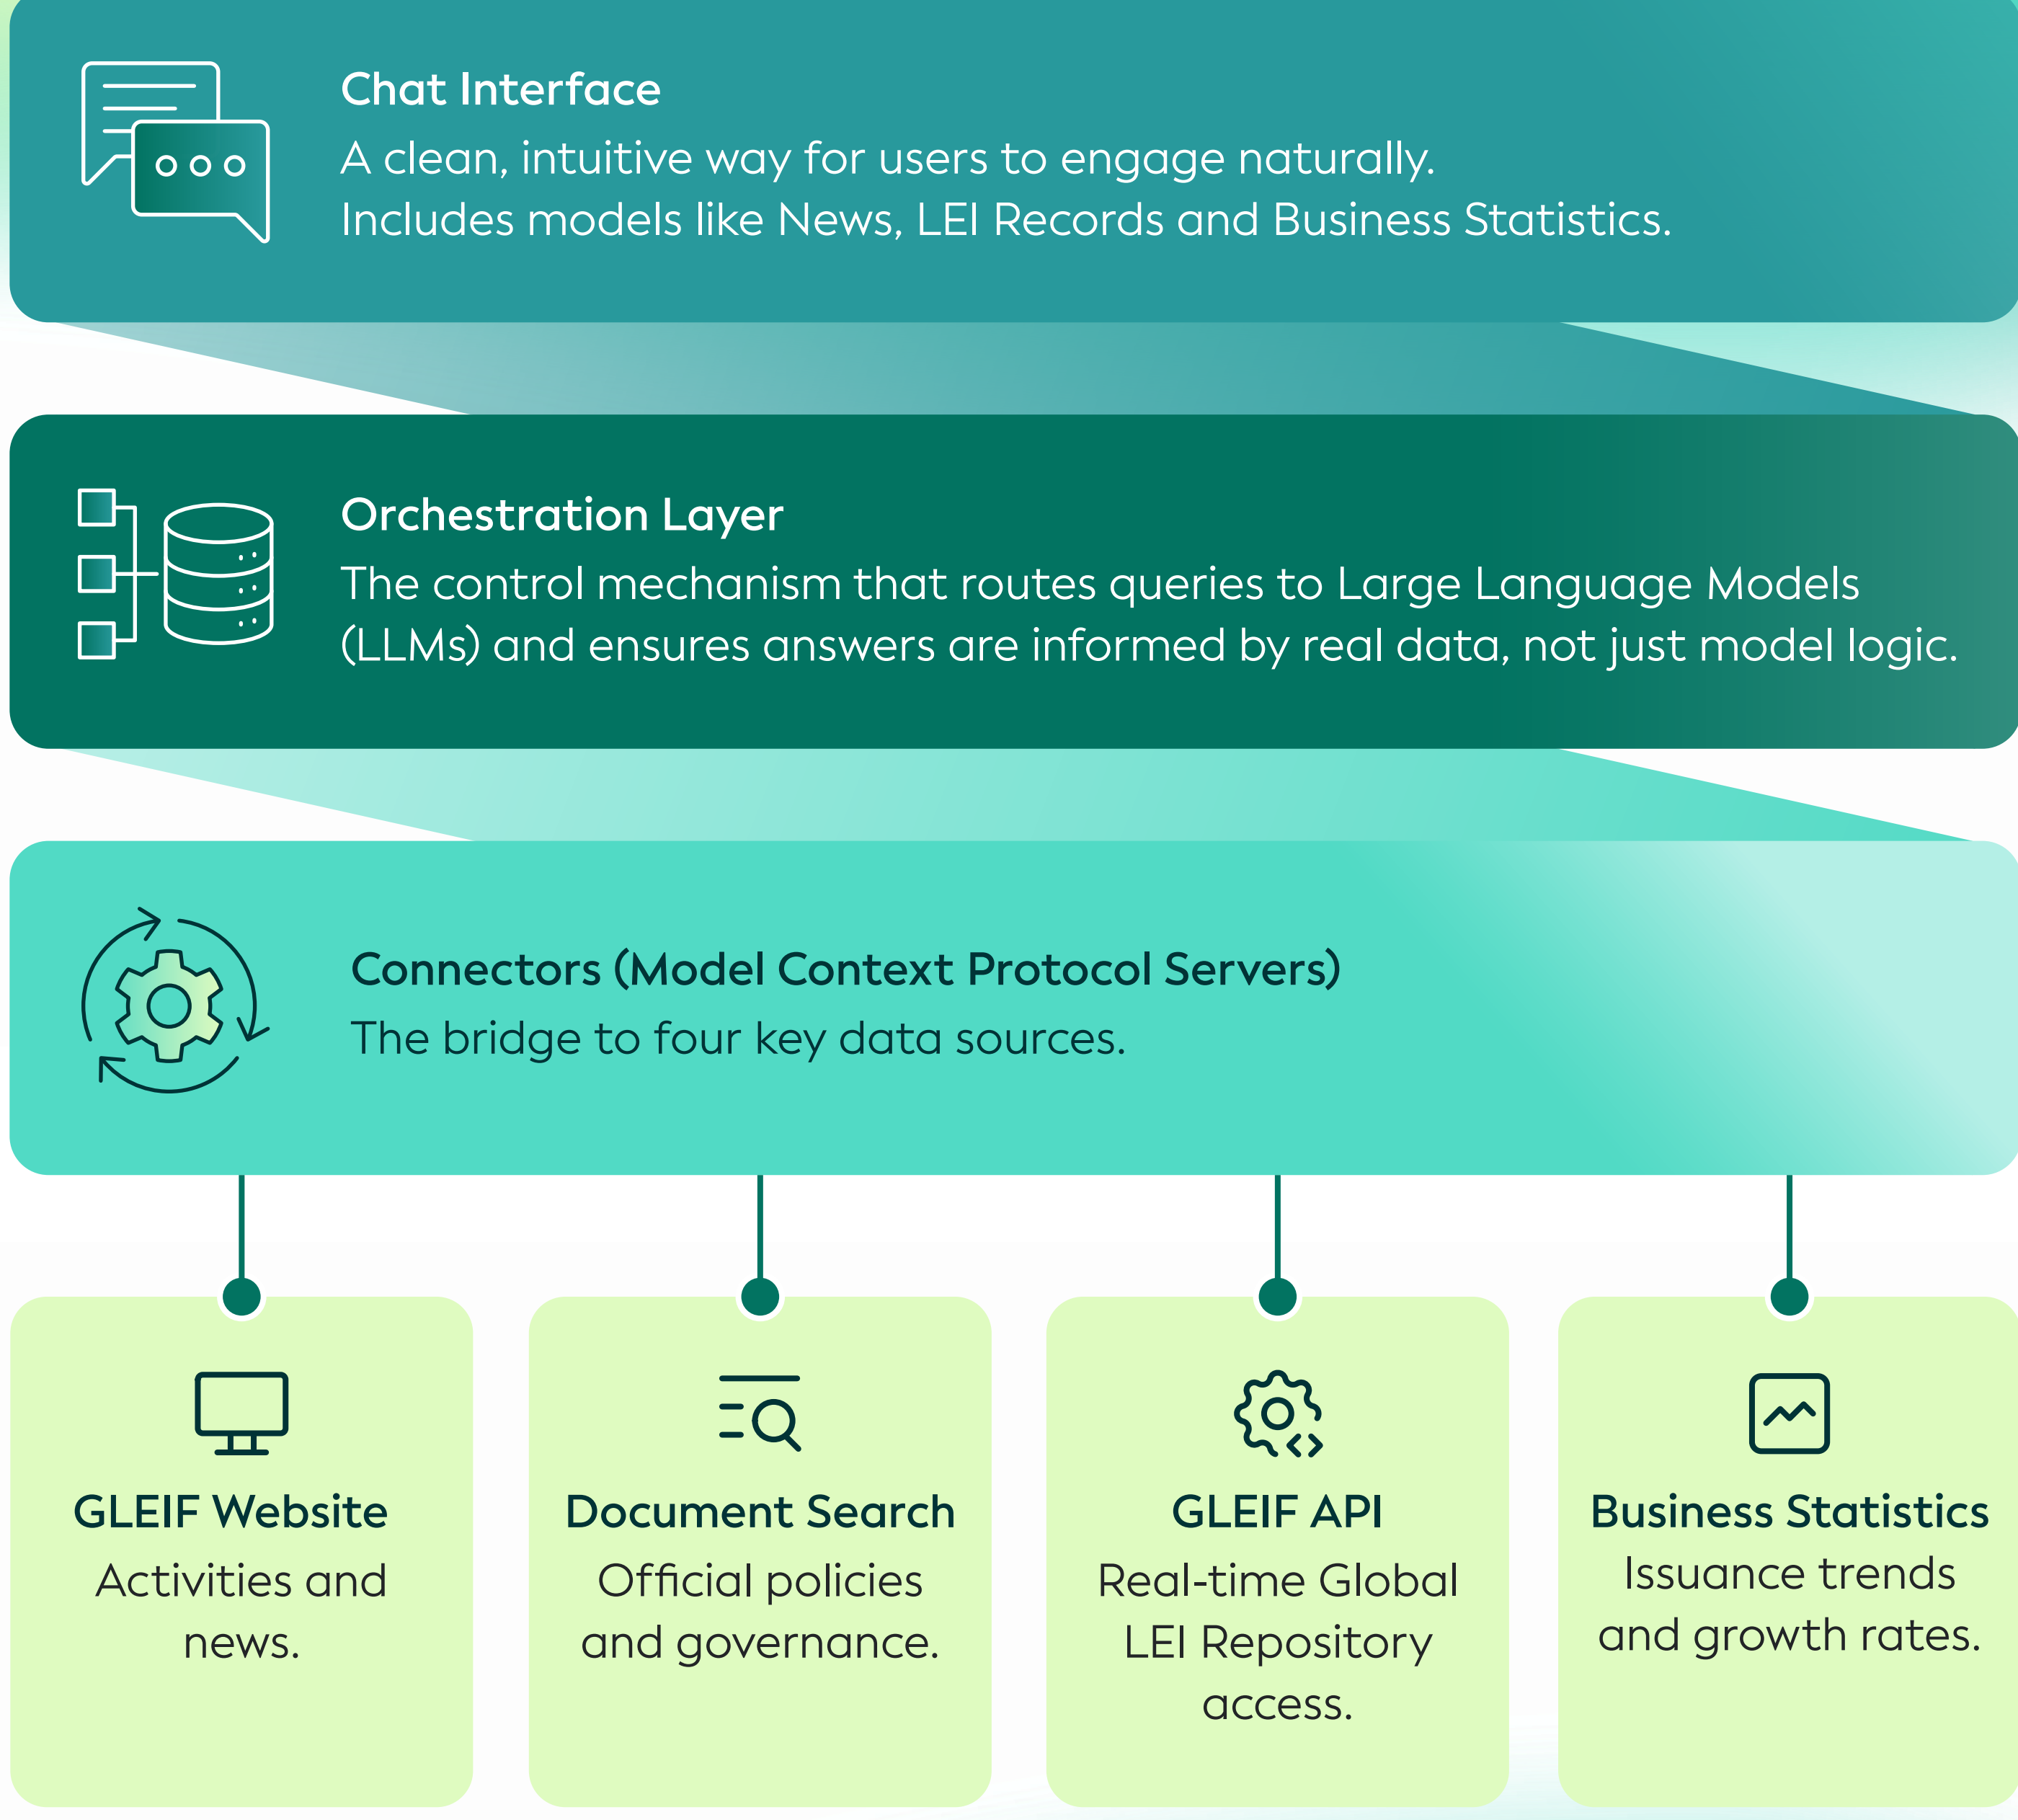

GLEIF AI Search is a coordinated system designed to deliver **clear, well-sourced, and verifiable** answers.

It moves users from fragmented information to **actionable insights** that are easy to understand and check.

How it Works

Three Layers of Intelligent Discovery

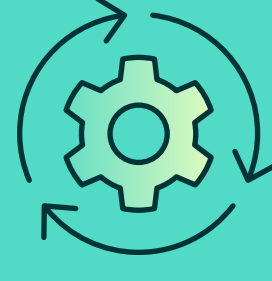

Chat Interface

A clean, intuitive way for users to engage naturally. Includes models like News, LEI Records and Business Statistics.

Orchestration Layer

The control mechanism that routes queries to Large Language Models (LLMs) and ensures answers are informed by real data, not just model logic.

Connectors (Model Context Protocol Servers)

The bridge to four key data sources.

GLEIF Website
Activities and news.

Document Search
Official policies and governance.

GLEIF API
Real-time Global LEI Repository access.

Business Statistics
Issuance trends and growth rates.

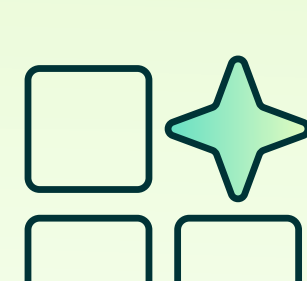

Why Quality Matters

- ✓ **Transparent Attribution**
Users see exactly where an answer comes from.
- ✓ **Verifiable Discovery**
Information is grounded in authoritative references.
- ✓ **Lowered Barriers**
Experts and non-experts alike can benefit from complex LEI data.

The Vision

Strengthening the Digital Ecosystem

Achieving higher-quality, interoperable financial data across the global ecosystem.

Interoperability

These connectors are modular and designed to integrate into external environments like ChatGPT and Claude.

Standardizing Trust

By making LEI data more accessible and verifiable, we strengthen trust in global digital systems.

Transforming data into opportunities

With GLEIF's trusted standards, the future of digital trust starts here.
