

GLEIF Service Report September 2016

Availability: The availability target reflects availability of the service as required to perform the related agreed function during a given month. In September 2016, all GLEIF services met the availability target.

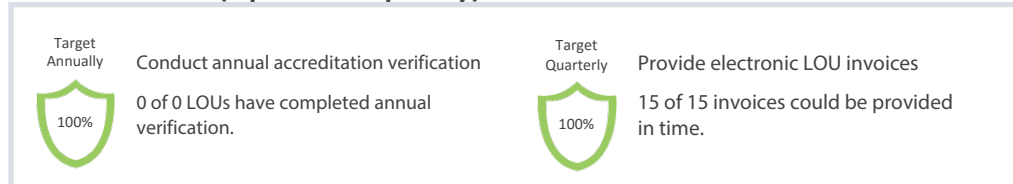

Administration: The target of distributing electronic invoices to all applicable parties during the last quarter was met. As no organizations require re-certification at this point, the 'Update Frequency' targets are not applicable with regard to the service 'Conduct Annual Accreditation Verification'.

Operating: With regard to the service 'Upload LEI & LE-RD', which requires GLEIF to upload LEI data within 1 hour, GLEIF executed the service within a substantially shorter timeframe. The target to provide the quarterly invoices within 10 business days with the service 'Provide Electronic Invoices' was met. As agreed with the service 'Perform Accreditation', GLEIF was reachable during CET business hours to answer questions. Services listed in gray below were not subject to the performance assessment in September 2016, because they will be implemented over the coming weeks.
