The assessment of January 2022 shows the Total Data Quality Score stabilizing again at 99.98 after a significant drop in August 2021, when GLEIF introduced new and updated Data Quality Checks to enforce more rigorous guidelines. As LEI issuers updated LEI Records to meet the new standards, the trend line has been continuously rising. This is the first reporting period since June 2021, in which all LEI issuers have achieved 100% Required Quality, considering the entire month’s data. LEI issuers continue to address Data Quality Check failures in the Expected and Excellent Quality. The number of LEI issuers achieving the maturity level targets has also increased (69% Expected and 64% Excellent Quality) compared to previous months.
