Highlights

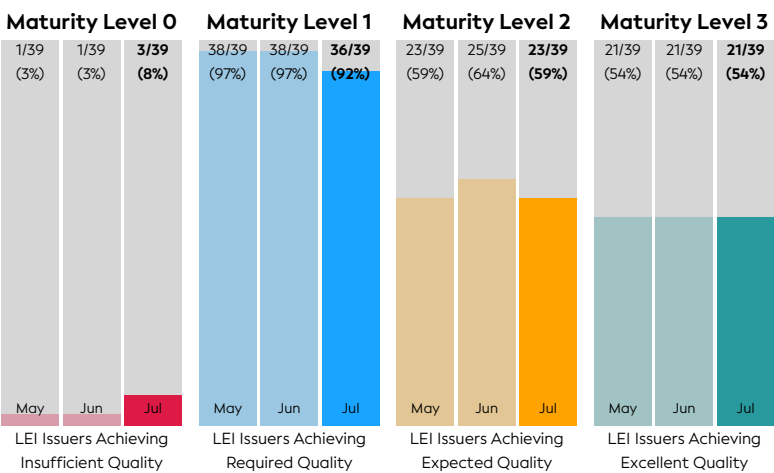

Interoperability enables data to be exchanged and used seamlessly across geographical borders and digital ecosystems while remaining consistent, understandable, and reliable. In a recent Pulse Poll, almost 70% of respondents identified the use of a common identifier, such as the LEI, as the most important measure for enhancing interoperability. GLEIF's growing network of mapping partners further extends this value by connecting the LEI with identifiers used across financial, corporate, securities, and energy data ecosystems. This makes it easier to identify entities, reconcile and combine information, and reuse data. Read more in our latest "Metric in Motion" blog.
