Response of the Global Legal Entity Identifier Foundation (GLEIF) to the Securities and Exchange Commission on the Proposed Rule for the enhancement and standardization of climate-related disclosures for investors
May 18, 2022

The Global Legal Entity Identifier Foundation (GLEIF) is pleased to provide comments to the Securities and Exchange Commission (Commission) on the Proposed Rule for the enhancement and standardization of climate-related disclosures for investors.

Consultations and proposed rules are opportunities to re-consider existing identifier schemes with longer term vision for a broader, standardized, and consistent use of global standards and open sharing across US and global regulations.

First, some background information on the LEI and GLEIF.

The Legal Entity Identifier (LEI) itself is a 20-digit, alpha-numeric code based on the ISO 17442 standard developed by the International Organization for Standardization (ISO). The code connects to key reference information that enables clear and unique identification of legal entities participating in financial transactions including their ownership structure. The LEI and its associated reference data are accessible to all as open, public data.

Established by the Financial Stability Board in June 2014 under the mission of improving financial stability and transparency due to the aftermath of the financial crisis, GLEIF is tasked to support the implementation and use of the LEI. Even though the primary and initial usage and adoption of the LEI predominantly was in financial markets and financial instruments, the LEI is use agnostic and therefore has been embraced by different industry sectors and regulators since its introduction by the Regulatory Oversight Committee, in which the Commission is an active member, and the Financial Stability Board in 2012. Further details on the use of the LEI in regulatory initiatives is provided here.

GLEIF will respond to the General Request for Comments:

Government activities to regulate data collection about climate related activities should be based on standardized data from existing domain standards, be machine-readable and interoperable with applicable international standards. With increased attention on important benefits of Environmental, Social, and Governance (ESG), there are opportunities currently for the Commission to shape national and global data policies to enable the submission of data that satisfies national and international regulatory goals, while supporting investors and market efficiency. The LEI provides a consistent means to identify entities and insures comparability when aggregating climate data for entities across borders.

The LEI is the only global standard for legal entity identification and the use of the LEI in U.S. regulations continues to increase. There have been several recent consultations that specifically mention the LEI from Bureau of Consumer Financial Protection, Financial Crimes Enforcement Network, Treasury, U.S.
Customs and Board Protection, in addition to the Commission’s recent proposed rules on security-based swaps, securities lending and money market fund reforms earlier this year, and more recently, the outstanding proposed rule for the registration of security-based swap execution facilities. The LEI currently exists in 29 various U.S. laws and regulations, the majority of which belong to the Commission, and globally the LEI exists in 126 laws and regulations.

GLEIF recommends that the Commission further leverages the LEI in the reporting of annual and quarterly reports, registration statements and Form S-K and S-X. The proposed rule presents an opportunity for the Commission to capitalize on recent proposed rules that seek to add the LEI in various form types, which would result in more comprehensive use of the LEI across various form types. As Commission Crenshaw indicated in recent official Commission statement in April, “I believe we should leverage the benefits of the LEI by incorporating it into our forms and filings wherever appropriate…”

The Commission could make further use of the XBRL reporting capability, which includes an LEI taxonomy that can be used in conjunction with any inline XBRL taxonomy. XBRL US is a nonprofit standards organization. The mission of XBRL US is to improve the efficiency and quality of reporting in the U.S. by promoting the adoption of business reporting standards. XBRL US is a jurisdiction of XBRL International, the nonprofit consortium responsible for developing and maintaining the technical XBRL specification, which is a free and open data standard widely used around the world for reporting by public and private companies, as well as government entities. Commissioner Crenshaw also stated during a speech titled the Lessons of Structured Data; “While the SEC has taken steps to incorporate LEIs into our filings, I believe we should continue to leverage their benefits by incorporating them into our forms and filings wherever it makes sense to do so. The ability to use LEIs in XBRL data only increases their potential utility for users of our data.”

H.R. 2989, the Financial Transparency Act (FTA) is a bill that seeks to unlock data in the financial regulatory sector. The proposed bill would direct seven of the Financial Stability Oversight Council (FSOC) financial regulatory agencies to adopt consistent data fields and formats for the information they already collect from industry under securities, commodities, and banking laws. On October 25th, the U.S. House of Representatives concluded consideration of the FTA. The bill passed with overwhelming support, 400-19. The legislation now is moving through the Senate for consideration. Although specific standards such as the LEI are not specifically mentioned in the bill, the requirement for “legal entity identifiers” is cited. The LEI is the only entity identifier that meets the criteria specified in the FTA, most notably, “be nonproprietary or made available under an open license” and “incorporate standards developed and maintained by voluntary consensus standards bodies”. Open, non-proprietary data standards, established by voluntary standard bodies, create transparency and facilitate the open exchange of information for regulators.

GLEIF is also working directly with financial institutions (FIs) within its Validation Agent operating model (VA) to issue LEIs for their clients, in cooperation with LEI Issuer organizations officially accredited by GLEIF, by leveraging their business as usual client identification procedures in Know Your Customer (KYC) and client onboarding processes. This model, triggering LEI growth beyond regulatory mandates, would help to make the financial ecosystem more transparent and accessible for all parties. VA’s have
already begun utilizing the LEI within capital markets, which will result in greater coverage of LEIs, at a lower cost, for debt and equity issuers over time, while also increasing the overall coverage of filing entities (including Form 20-F filers) more broadly.

The Commission also could benefit from data that is contained in the LEI record. For example, company legal name, legal address and headquarter address, all of which are part of a LEI record, can be retrieved automatically or verified from a LEI record. GLEIF facilities mapping through an open-API, which is available at no costs to end users. All LEI data is validated and verified by LEI issuers against authoritative sources which results in a trusted source of entity data.
