

Global Business Starts With Trust

The Global LEI Ecosystem enables trusted organizational identity worldwide, built on an open, standardized, and regulatory-endorsed system for legal entity identification and verification.

LEI

Legal Entity Identifier

ISO-standardized 20-digit identifier ensures global consistency of entity identification.

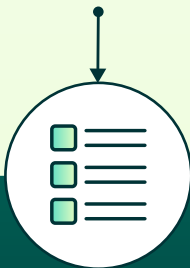

vLEI

Verifiable Legal Entity Identifier

Digitally trustworthy counterpart of the LEI for automated workflows.

Together, the LEI and vLEI create a layered trust model. The LEI ensures global consistency of entity identification, while the vLEI enables cryptographic verification of that identity and associated authority in digital workflows.

Open Data

Make organizational identity transparent, standardized, and interoperable.

What it does:

Connects authoritative sources and creates interoperable identity data.

Enabled through:

- ✓ **LEI Issuers** - Managing LEI records.
- ✓ **Registry Linkages** - Connecting LEIs to business registers.
- ✓ **Mapping Partnerships** - Linking LEIs to other identifiers.
- ✓ **GODIN** - Expanding open data access.

Verifiable Trust

Make identity and authority digitally verifiable.

What it does:

Enables cryptographic verification of organizations and authorized representatives.

Enabled through:

- ✓ **vLEI Governance Framework** - Structuring trusted issuance.
- ✓ **vLEI Issuers** - Providing verifiable credentials.
- ✓ **Verifiable Credentials Infrastructure** - Enabling digital proof and verification.
- ✓ **Official Organizational Roles** - Verifying authority to act.

Connect & Scale

Make trusted identity usable across systems, borders, and ecosystems.

What it does:

Embeds trusted identity into platforms, workflows, and digital trust networks.

Enabled through:

- ✓ **Partner Program** - Driving ecosystem adoption.
- ✓ **Digital Trust Networks** - Reusing identity across systems.
- ✓ **Regulatory Adoption** - Embedding trusted identity into frameworks.
