

METRIC IN MOTION

Transforming Data into Opportunities

Stay in Sync with LEI Data

Delta Files and the GLEIF API let users pick out new and updated Legal Entity Identifier (LEI) records, check each change against its previous value and update their own systems without reprocessing the full dataset.

Metric of the Month

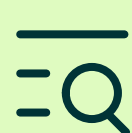

7,354

LEI records were added or updated each day, on average, in September 2026, representing **220,620** changes over the month, across more than **3.4 million** in the **Global LEI system**.

The Impact

From Data Changes to Actionable Information

Each day's updates cover legal identity, addresses, registration details and relationships. Users can act on them in three steps:

Identify

Work only with new and changed records.

Validate

Compare each field's previous and current values.

Integrate

Update downstream systems with confidence.

How It Works

Two Ways to Identify What Changed

Delta Files

Isolate Bulk Dataset Changes

Delta Files contain only the records that are new or changed since the previous publication (eight hours earlier), or over the last day, week or month.

GLEIF API

Individual LEI Updates

For any LEI, users can see which fields were modified and compare the previous and current values.

Transforming Data into Opportunities

With GLEIF's trusted standards, the future of digital trust starts here.
